

PIPE BEVELER

TECHNICAL SPECIFICATION:

- Size range:** 50mm - 110mm (1" - 4")
- Piping:** Air-Pro®, Chem Proline®, Proline®, Super Proline®
- Materials:** PE100/PE100RC, PP, PVDF
- Weld Type:** Thermofusion socket welds
- Tool weight:** 3 lbs.

NOTE: the pipe beveler can also be used on PVC and CPVC solvent cement weld installations on 1-1/2" through 6" pipe.

FEATURES:

- Pipe beveler only needs a few turns around the pipe to make the 15° smooth bevel.
- Adjusts to bevel multiple pipe sizes with one tool.

BEFORE:

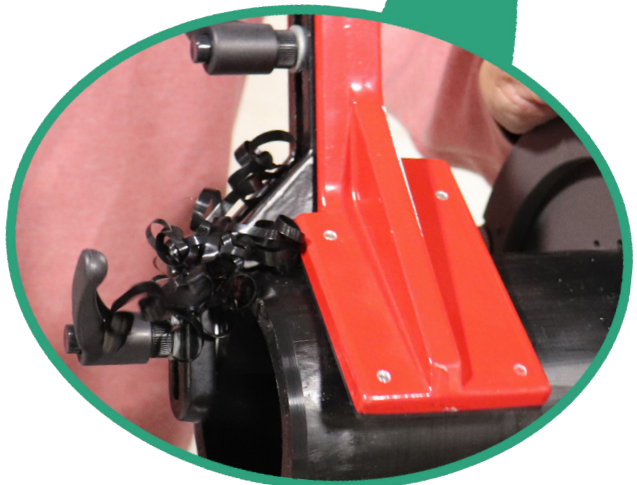

AFTER:

ABOUT THIS TOOL:

This tool is ideal for beveling the ends of plastic pipe up to 110mm (4") that will be inserted into a socket fusion fitting.

Note: Pipe systems using the PREP tool do not require a beveler, as the PREP tool bevels the pipe. Any socket weld done without the use of the PREP tool requires beveling.
